## Introduction

This guide explains how to configure your iPhone to access your email account.

This tutorial was created using a iPhone 4G running iOS 4.0. If you are using different hardware or a different OS version, these instructions may differ.

The domain example.com is used throughout this guide as a substitute for your domain name. If your domain is johnsmith.com, use johnsmith.com in place of example.com.

## Configuration of your device

Follow the steps below to set up email on your iPhone.

### Launching Settings and Adding Account

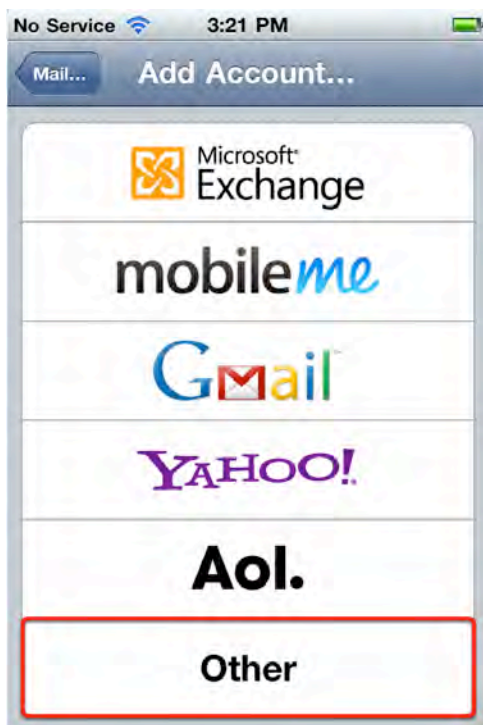

Tap Settings on your home screen.

Scroll down and tap Mail, Contacts, Calendars.

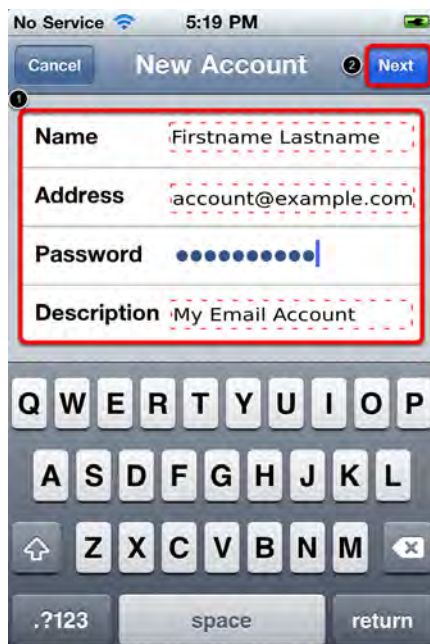

Tap the Add Account option.

Tap Other.

Tap Add Mail Account.

Enter the following settings:

Name

The name displayed when you send email

Address

Your full email address

Password

Your email account password

Description

Account description of your choice

Tap Next.

Tap IMAP.

## Incoming Mail Server Details

Under the Incoming Mail Server section, enter the following settings.

Host Name:  
mail.your\_domain

User Name:  
Your email account

Password:  
Your email account password

Scroll down to the Outgoing Mail Server section.

## Outgoing Mail Server Details

Under the Outgoing Mail Server section, enter the following settings:

Host Name:  
mail.your\_domain

User Name:  
Your email account

Password:  
Your email account password

Tap Next.

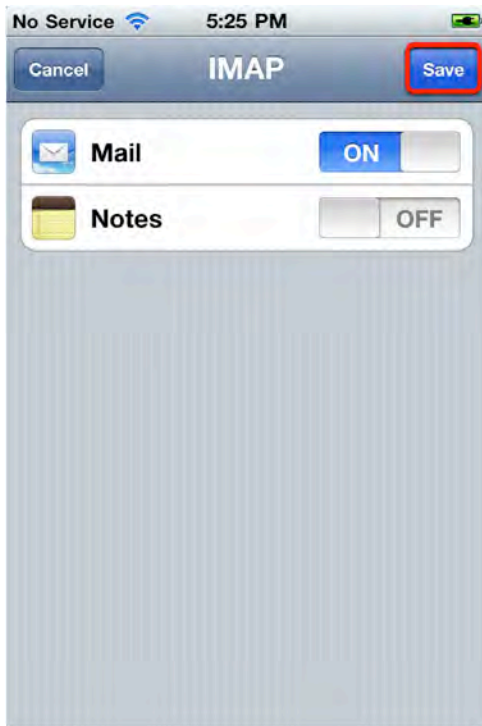

Your device will verify your email account settings. This may take several minutes.

If you receive an error indicating that you Cannot Connect Using SSL then tap Yes to continue without SSL.

## Completing Account Configuration

Tap Save.

Your iPhone may display this screen briefly stating that it has Configured sync.

The email account configuration has been completed!
